# The iWatch Application from iThinQware.

## The first mobile application for crime tips, crime reports & crime analysis ever invented.

### crime tips

*with text, images & video attachments*

Smartphone apps are free downloads from the app-store.

Tips may be text, email, phoned-in or complete profile with images and video attachments.

Tips are displayed on crime maps, and include the location data of the image as well as the sender.

Phonetips are received by the server, stored as sound files & transcribed as text.

Tips are automatically translated from Spanish to English.

Tips are classified by offense type and may be automatically forwarded to the proper investigative resource.

Tips may be forwarded as links, downloaded as word files, exported as csv or imported as data for integration to CAD.

Embedded tip forms and signup for alerts can be done online

The target user for smartphones is growing faster than any other segment of communications ever imagined. Technology that has created a digitally connected America that is changing everything.

It's a channel for Policing that has never before existed, and, until iWatch, was unreachable and unknown.

iWatch Mobile is all the public needs to join Law Enforcement in fighting crime. Regardless of handset, carrier or language, anyone can use iWatch.

The public can submit tips anonymously, or with full disclosure. Add images or video to a tip from almost any smartphone or any PC.

The Admin can reject or accept the tip and forward it to a specific officer for follow-up, accept and publish the tip & the video to an alerting group for investigation providing faster response during the early stages of an investigation.

Multiple handsets are supported, nearly 94% of all phones

### crime reports

*in your browser, on your iPad, on a smartphone*

Reports are searchable by offense number, date range, keywords in text, suspect profile, vehicle, ip address or location.

Unique identifier permits the tip to be associated with prior offenses or a new report.

Reports may stored for internal use, or may be forwarded to other agencies with comments.

Reports received may be auto-responded or live response (ie: Dispatch or CID).

Geocoding of reports permits display of reports by Address, Divisions, Precincts

Reports may be displayed on dashboard for both smartphone or PC browser.

Reports may be assigned to Tactical Groups as notification groups,

Social Media content may be used to generate reports based upon keyword or user profile.

iWatch CID tips may be new, or received as tips from prior offenses by clicking on the offense in a map. Mapping the tips permits forwarding of the tip to the appropriate agency, precinct or investigative resource.

In the backend, the dashboard console makes it simple to approve and publish information for investigation or dispatch.

iWatch CID permits information (rewards, tip lines, video, photos, sketches, etc.) to be linked with offense reports,

You can then publish alerts, warnings, maps, and other information to selected audiences (other agencies, specific law enforcement officers, the general public, news media, and Crime Watch associations or other groups).

### crime alerting

*in the app, in email, on the phone, on PC's*

Deliver Crime Alerts, Public Safety Alerts, Weather Alerts, Reward Notices, Traffic Warnings from a single dashboard.

Citizens signup for free and only get alerts on categories they have selected.

Tens of thousands of messages may be delivered in minutes without additional expense.

Alert groups may include Law Enforcement, Private Security, School Safety, Port Safety, Airports, or other.

Alert Groups may be created by Administrators with out additional expense.

Alerts may include html, video links or images.

Alerts may include links to Crime Maps, which can generate crime tips.

Citizen alert signups permit user to create a profile for themselves for both SMS and Email notifications.

Send alerts and get tips from mapped data

Cities everywhere are being increasingly challenged by the need to send immediate notifications to citizens.

iTAG is a powerful solution to this growing problem. As an extension of the iWatch Suite of Mobile applications, iTAG is a low-cost, high-impact toolset allowing citizens to receive alerts as text, emails, with simple formatting, html, images and video from Public

Users may subscribe, or for professionals be "invited" to single groups or multiple task forces.

Users are then mapped and displayed in a searchable database deliverable to handsets or websites for the public, departmental or interagency sharing and collaboration.

You control the message, you control the categorie of the message, you control the delivery of the message and who is authorized to receive it.

*After we made iWatch powerful, we made it*

# feature rich, and priced

*so that any size agency, county or state, there is a product*

# for your needs and budget.

The iWatch Suite of Applications from iThinQware has been developed to fulfill the technological challenges of Community Policing in today's always on, always connected world. Regardless of handset, carrier or language, iWatch gives Law Enforcement the most cost efficient means of gaining Human Intelligence. With smartphones now equalling 40% of the population, the mobile handset and the dashboard in iWatch lets you gain that contact with the community, get the information you need, and assign the resources as efficiently as possible.

Pick the iWatch Application that's right for your department and budget by comparing feature for feature from the list below.
